DETAILED ACTION

Response to Amendment

Amendment filed 6/19/06 forms the basis for this office action. In said amendment applicant substantially amended all claims not only with regard to the claims in amendment filed 2/21/06 held non-responsive in miscellaneous office action mailed 5/15/06 but also when compared with the claims in amendment filed 10/05/05 rejected in the office action mailed 11/17/05. It is understood from applicant's response that the claimed invention is from now on drawn to semiconductor devices as otherwise claimed but with both gate insulating film and base film comprising hydrogenated silicon oxynitride. This amendment further complicates the prior art search. In view of the steadily increased complexity of the claim language the following restriction / election-of-species requirement is in order:

Election/Restrictions

- 1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 41-50, 57-59, 62-64 and 67-69, drawn to a semiconductor device comprising pixel portion and driver circuit on a substrate, classified in class 257, subclass 365+.
 - II. Claims 51-56, 60-61, 65-66 and 70-71, drawn to a semiconductor device comprising a pixel portion on a substrate, classified in class 257, subclass 49+.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the combination does not require all the limitations of the subcombination, for instance first and second base insulating films (see independent claims 51 and 54). The subcombination has separate utility such as a pixel TFT driven by MOSFETs with channels constituted of bulk semiconductor layers.

Because these inventions are independent or distinct for the reasons given above and have acquired a separate status in the art in view of their different classification, restriction for examination purposes as indicated is proper.

- 2. Upon election of either the Group I or the Group II invention applicant is further required under 35 U.S.C. 121 to elect one of the following disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable:
 - **Species 1**: semiconductor film comprising the channel is re-crystallized (Embodiments 1-5, pages 13-40; Figures 1-17 and 19-21).
 - Species 2: semiconductor film comprising channel is amorphous (Embodiment 7, page 43).

Application/Control Number: 10/669,284

Art Unit: 3663

Species 1 and 2 are patentably distinct because charge carrier transport properties in field effect transistors such as TFTs depend noticeably on whether or not the channel region is amorphous or crystalline, amorphous and crystalline being mutually exclusive.

- 3. <u>Upon election of either the Group I or the Group II invention and either Species 1</u>
 or Species 2 applicant is further required under 35 U.S.C. 121 to elect one of the following disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable:
 - Species A: top gate TFT structure (Embodiments 1-2, 4-5 and 8; pages 13-24, 29-41 and 43-44; Figures 1-5 and 9-17 and 19-22).
 - Species B: bottom gate TFT structure (Embodiments 3 and 6, pages 24-29 and 41-43; Figures 6 and 18).

Species A and B are patentably distinct because top and bottom thin film transistors (TFTs) are patentably distinct, while either the gate is "under" (i.e., at same side as substrate when viewed from) the channel, or the gate is above the channel, i.e., the top and bottom gate TFTs represent mutually exclusive embodiments.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not

distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Johannes P. Mondt whose telephone number is 571-272-1919. The examiner can normally be reached on 8:00 - 18:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jack W. Keith can be reached on 571-272-6878. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
